

IMPRESS

On Demand Digital Hot Foil Printing System

The Impress System compact, digital printing system, available in three different formats, can be used to replace traditional hot foil printing, screen printing, and pad printing processes.

These systems significantly reduce the direct and indirect costs of printing by eliminating costly set-up time, as well as the dies, screen, inks, clichés, and solvents used in traditional printing methods.

The systems are cost effective for both short, long and personalised productions runs and apply computer generated text and graphics instantly.

Safe and easy-to-use, they produce on demand, sharp, and highly durable impressions.

The printing system can be supplied in three formats - two configurations are available for printing flat products and one system can be used to print cylindrical items. Please note, system platforms are not interchangeable.

The Impress System represents the perfect platform for printing variable data onto a wide variety of products including both personalised promotional products and manufactured items that require individual serial numbers.

Digifoil L System

- 300 x 300 dpi output resolution (300 x 600 available)
- Print speed of 2.5cm / second
- Windows 2000 & XP required
- Custom printer driver
- Compatible with most software
